EDUCATION

ITM Vocational University, Vadodara | Expected Graduation: May 2027

Bachelor of Technology in Computer Science and Engineering (Data Science)

- **Cumulative CGPA: 9.54 / 10.0**
- **Key Coursework:** Data Structures & Algorithms, Object-Oriented Programming, Applied AI, System Design, Statistics, Database Management (SQL).

TECHNICAL SKILLS

- **Languages:** Python (Expert), SQL (PostgreSQL, MySQL), TypeScript, C++, Java.
- **AI & Research:** Natural Language Processing (NLP), NLU, Sentence Transformers, Vector Embeddings, OpenCV, Pandas, NumPy, Scikit-Learn.
- **Tools & Frameworks:** FastAPI, Next.js, Git/GitHub, Linux, REST APIs, JWT Authentication, Streamlit.

RESEARCH & TECHNICAL PROJECTS

HireSight — AI-Powered NLU Evaluation System

- Developed an end-to-end AI tool using **Sentence Transformers** to perform semantic matching between job descriptions and resumes, moving beyond keyword matching to intent-based analysis.
- Built a text-processing pipeline using PyPDF2 and python-docx to extract and structure data from unstructured PDF/DOCX files.
- Engineered a relevance scoring algorithm (0-100) to provide automated, data-driven feedback on candidate suitability.
- *Tech Used:* Python, Streamlit, SentenceTransformers, NLU, SQLite.

SkillLens — Skill-Intelligence & System Design Framework

- Architected a system to analyze technical proficiency by evaluating GitHub repositories and project metadata rather than traditional metrics.
- Designed a secure, scalable backend using **FastAPI and PostgreSQL**, implementing JWT-based authentication for role-based access control.
- Structured the database schema to remain extensible for future AI-driven code quality analysis and developer behavior modeling.
- *Tech Used:* FastAPI, PostgreSQL, SQLAlchemy, Next.js, TypeScript.

SSIP Hackathon — State-Level Finalist

- Selected as a Finalist in the Gujarat SSIP (Student Start-up & Innovation Policy) Hackathon for developing a real-time waste-segregation monitoring system for the GMC.
- Designed a scalable system architecture capable of handling real-time data inputs and providing live dashboard analytics for municipal officials.
- Engineered geotagging and offline-sync functionalities to ensure data reliability and system performance in diverse urban environments.

ACHIEVEMENTS

- **SSIP 2023-24 Finalist:** Recognized for excellence in problem-solving and system implementation at a state level.
- **Academic Excellence:** Maintained a consistent 9.0+ CGPA, ranking in the top tier of the engineering batch.
